

Advanced EDR Data Analysis

Over 5 days, the separate **CDR Data Analyst** course can reasonably only cover a finite amount of information. Adding additional case problems designed to illustrate specific concepts not to mention trying to address EDR Tool data from non-Bosch CDR Tool systems are beyond the scope and time limitations of the core 5 day **CDR Data Analyst** course and that's where this **Advanced EDR Data Analysis** course excels.

In addition to what would otherwise be traditional EDR data from the core OEMs associated with the Bosch CDR Tool, this course explores the use of data retrieved using the Tesla EDR Tool, Tesla CAN Bus (diagnostic) data, the Hyundai and Kia EDR Tools, as well as active safety system data from various manufacturers.

Major topics include:

- Vehicle Data Sources
- Communication bus basics
- Bus conflicts and error indicators
- Recent Bosch CDR Tool data developments
- Tesla EDR Tool data
- Tesla Tool CAN bus (diagnostic) data
- Reading and understanding Tesla CAN Logs
- Recent developments in Hyundai-Kia EDR Tool data
- Toyota Techstream data
- Case problems and in-class exercises
- ...and more!

Tuition: \$800 (USD) per person
